

## Foreign Exchange Committee Releases FX Volume Survey Results

**New York, July 24, 2018** – The Foreign Exchange Committee today released the results of its twenty-eighth Survey of North American Foreign Exchange Volume. Key findings of the April 2018 survey are featured below.

- Average daily volume in total over-the-counter (OTC) foreign exchange instruments (including spot, outright forward, foreign exchange swap, and option transactions) was \$993.6 billion in April 2018. The average daily volume during the April 2018 survey period was 5.2 percent higher than the average daily volume in the October 2017 survey period and 11.7 percent higher than a year earlier.
- Average daily volume increased across several instrument types, including increases in spot, forward, and OTC options turnover of 9.1 percent, 6.2 percent, and 5.6 percent, respectively. Swap volume decreased slightly by 0.6 percent.
- Turnover reported by “Other Dealers” and “Reporting Dealers” increased by 23.1 percent and 9.7 percent, respectively, while turnover from “Other Financial Customers” and “Nonfinancial Customers” decreased by 3.4 percent and 2.9 percent, respectively.
- The largest increases in volume across all instruments by currency pair occurred in the GBP/USD pair which increased by \$15.4 billion and the USD/CAD pair which increased by \$7.2 billion. The largest decrease in volume occurred in the USD/JPY currency pair where turnover decreased by \$7.4 billion.

The survey was developed in order to provide the market with frequent information on the size and structure of foreign exchange activity in North America. To achieve a representative survey, the Committee invited twenty-one leading financial institutions active in the North American foreign exchange market to contribute data on the level of turnover during the month of April 2018. The Committee also collaborated with the United Kingdom's Foreign Exchange Joint Standing Committee (FXJSC), the Singapore Foreign Exchange Market Committee (SFEMC), the Tokyo Foreign Exchange Market Committee (TFEMC), the Canadian Foreign Exchange Committee (CFEC), the Australian Foreign Exchange Committee (AFXC), and Hong Kong's Treasury Markets Association (TMA) which conducted similar surveys for the U.K., Singaporean, Japanese, Canadian, Australian and Hong Kong markets, respectively, over the same period. The FXJSC, SFEMC, CFEC, AFXC and TMA are releasing their survey results today. The TFEMC released its results late yesterday.

For the purposes of the survey, turnover is defined as the gross value of all new deals entered into during the reporting period and is measured in terms of the notional amount of the contracts. Survey data are broken out by four foreign exchange instruments, thirteen currency pairs, four counterparty types, and five execution methods and are reported both in terms of daily average and total monthly volume. The reporting basis for the survey is the location of the price-setting dealer. While similar in nature, the survey is not comparable to the Bank for International Settlements' Triennial Central Bank Survey of Foreign Exchange and Derivatives Market Activity, given the differences in the reporting methodologies.

The Foreign Exchange Committee is composed of individuals from institutions that participate actively in the foreign exchange markets as well as other financial markets worldwide. The Committee's objectives include 1) serving as a forum for the discussion of best practices and technical issues in the foreign exchange market, 2) fostering improvements in risk management in the foreign exchange market by offering recommendations and guidelines, and 3) enhancing the legal certainty of foreign exchange contracts through the development of standard documentation. The Committee was formed in 1978 under the sponsorship of the Federal Reserve Bank of New York.
