# **Empire State Manufacturing Survey**

Note: Survey responses were collected between November 3 and November 10.

Business activity increased at a solid pace in New York State in November, according to firms responding to the Empire State Manufacturing Survey. The headline general business conditions index rose eight points to 18.7, its fourth positive reading in the last five months. New orders and shipments increased significantly. Delivery times lengthened modestly, and supply availability worsened somewhat. Inventories expanded. Labor market indicators improved, pointing to a small increase in employment and a longer average workweek. The pace of both input price increases and selling price increases slowed slightly, but remained elevated. Capital spending plans grew. Firms expect conditions to improve in the months ahead, though firms were not as optimistic as last month.

**Activity Picks Up** 

Manufacturing activity grew moderately in New York State, according to the November survey. The general business conditions index climbed eight points to 18.7, its highest level since last November. The new orders index rose twelve points to 15.9 and the shipments index increased two points ECONOMIST COMMENTARY

"Manufacturing activity grew at a solid pace in New York State, with the survey's headline index reaching its highest level since last November. Both employment levels and hours worked rose modestly. While firms expect conditions to improve, optimism for the future dipped."

~Richard Deitz, Economic Research Advisor at the New York Fed

to 16.8, pointing to significant gains in both orders and shipments. After three months of negative readings, the inventories index rose eight points to 6.7. The delivery times index edged up to 7.7, and the supply availability index ticked down to -11.5, continuing the trend of somewhat longer delivery times and worsening supply availability.

A Modest Increase in Employment

The index for number of employees ticked up to 6.6, while the average workweek index rose to a multi-year high of 7.7, suggesting a modest increase in employment levels and hours worked. Both price indexes declined slightly but remained elevated: the prices

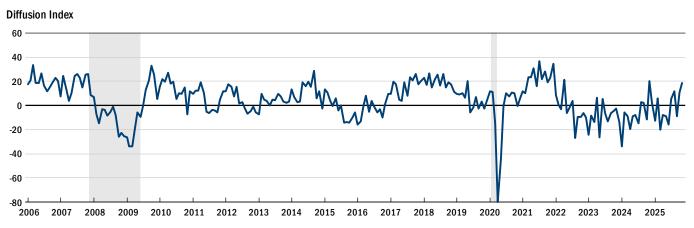

paid index dropped three points to 49.0, and the prices received index also dipped three points to 24.0.

#### **Optimism Dips**

While firms still expect conditions to improve in the months ahead, the index for future general business conditions declined to 19.1, down eleven points from its recent high in October. New orders and shipments are expected to increase, and supply availability is expected to be little changed. Firms continue to anticipate significant price increases ahead. Capital spending plans grew, with the capital expenditures index rising fourteen points to 11.5.
