Research publications

- A Working Group formed by the Committee on the Global Financial System (CGFS) conducted macroeconomic and financial stability analyses on the changing patterns and composition of international capital flows.

- For a large sample of emerging and advanced economies, Carrière-Swallow et al. (2021) find evidence that a relatively more credible monetary policy regime—measured by better-anchored inflation expectations—is associated with lower exchange rate pass-through to consumer prices.

- Laurent et al. (2021) highlight the importance of the Legal Entity Identifier (LEI) - which identifies legal entities involved in financial transactions - in monitoring systemic risk in the global economy.

- Employing supervisory data on the U.S. branches of foreign banks and their syndicated loans, Correa et al. (2021) show that the branches of euro-area banks suffered a liquidity shock in the form of reduced access to wholesale funding from U.S. money market funds during the European sovereign debt crisis.

- Using administrative data di Giovanni, et al. (2021) analyse the transmission of the Global Financial Cycle (GFC) to domestic credit market conditions in Turkey.

- Dell’Ariccia et al. (2021) argue that the rise of corporate intangible capital at the aggregate level reduces the market for commercial debt, and thus the market for bank commercial and industrial (C&I) loans, inducing banks to reallocate their lending capacity to non-C&I assets, such as mortgages.
**Forthcoming events**

- ECB Strategy: the 2021 review and its future Report launch and discussion
- 9th IMF Statistical Forum: Measuring Climate Change: The Economic and Financial Dimensions
- MoFiR Virtual Seminars on Banking
