IBRN members’ publications

- **IBRN researchers** examine how monetary policy in core economies affects bank lending in small open economies (SOE). They find, when interest rates are high, monetary policy cuts in core economies can reduce credit supply in SOE, in contrast, when interest rates in core economies are low, further expansionary monetary policy increases lending in these economies.

- “**The Economics of Banking**” by Jin Cao (2022) was published. This book provides an accessible overview of banking theory and practice. It introduces readers to the building blocks of fundamental theories and provides guidance on state-of-the-art research, reflecting the dramatic changes in banking research over the past two decades.

- **The global footprint of Chinese banks** (Casanova, Cerutti & Pradhan)

- **COVID-19 and Public Health** in India (Sinha & Jain)

Research publications

- **Alogoskoufis et al.** describe the ECB’s climate stress test, which assesses the resilience of euro area firms and banks to climate risks. The results show that there are clear benefits to acting early. Additionally, the early adoption of policies to drive the transition to a zero-carbon economy also brings benefits in terms of investing in and rolling out more efficient technologies.

- **Berger & Demirgüç-Kunt** analyse twin pandemic surprises, namely the **economic surprise** related to US fiscal supports, and the **financial surprise** concerning the avoidance of a banking crisis. They find these twin surprises are mutually reinforcing.
Forthcoming/past events

- The first annual conference on the Monetary Toolkit theme of the Bank of England Agenda for Research (BEAR) will take place on 24-25 February 2022 (register by 1 February)
- Economic Impacts of Interjurisdictional Tax Competition will take place on 28 January 2022 (streamed online)
