Responses to Survey of Primary Dealers
Markets Group, Federal Reserve Bank of New York
June 2016
For most questions, median responses across dealers, along with the 25th and 75th percentiles, are reported. For questions that ask respondents to give a probability distribution, the average response across dealers for each potential outcome is reported.¹ Brief summaries of the comments received in free response form are also provided.

Responses were received from 23 primary dealers. **Except where noted, all 23 dealers responded to each question.** In some cases, dealers may not have provided forecasts extending to the same time horizon as requested in the survey. In these instances, the number of respondents who answered all parts of the question is indicated.

### Monetary Policy Expectations

1. a) Provide below your expectations for changes, if any, to the language referencing each of the following topics in the June FOMC statement.

#### Current economic conditions:

Many dealers expected the Committee to upgrade its current growth assessment in the June FOMC statement, with several pointing to upward revisions to estimates of U.S. economic growth in the second quarter. Most dealers also suggested that the Committee would downgrade its assessment of labor market conditions or note that employment growth had slowed. Some dealers also expected that the Committee would acknowledge a pickup in household spending in the June FOMC statement.

#### Economic outlook:

(22 responses)

Some dealers specifically noted expectations for few significant changes to the Committee’s communication on the economic outlook in the June FOMC statement, while several dealers noted that they expected the Committee to acknowledge the recent weakening in labor market data.

#### Communication on the expected path of policy rates and forward guidance on the target federal funds rate:

(22 responses)

Many dealers specifically noted expectations for no significant change in the Committee’s communication on the expected path of policy rates and forward guidance on the target federal funds rate in the June FOMC statement.

#### Communication on the Committee’s policy of reinvesting principal payments on Treasury and agency securities:

(22 responses)

All dealers that submitted responses to this question expected no change in the Committee’s communication on its policy of reinvesting principal payments on Treasury and agency securities.

#### Other:

(8 responses)

Dealers did not provide substantial commentary in this section.

¹Answers may not sum to 100 percent due to rounding.
b) What are your expectations for the medians of FOMC participants' economic projections in the Summary of Economic Projections (SEP)?

Some dealers anticipated that FOMC participants' economic projections for 2016 would be adjusted in response to recent data releases, with some dealers noting their expectation that the median of participants' forecasts for 2016 GDP growth would likely decrease, and some also suggesting that the medians of their forecasts for 2016 headline and/or core PCE inflation may increase slightly. Several dealers also noted the potential for downward revisions to participants' forecasts for the unemployment rate, while several dealers reported that they expected few significant changes to the medians of FOMC participants' economic projections in the SEP.

c) What are your expectations for the medians of FOMC participants' target federal funds rate projections in the Summary of Economic Projections (SEP)?

Please explain any assumptions underlying your expectations.

(22 responses)

In explaining their responses, several dealers indicated that they expected the median of FOMC participants’ projections for the target federal funds rate at year-end 2016 to be revised downward. In addition, some dealers noted their expectation that the medians of FOMC participants’ rate projections would reflect a more gradual expected pace of policy normalization, with several dealers citing perceived downside risks to the outlook from recent global economic and financial market developments and several others noting the impact of an expected lower real neutral federal funds rate. Several dealers also reported that they expected few significant changes to the medians of participants’ target federal funds rate projections.

d) What are your expectations for the Chair’s post-FOMC conference?

Several dealers expected that the Chair would express confidence in the economic outlook while some expected her to acknowledge the recent weaker-than-expected labor market data. Additionally, several dealers expected that the Chair would continue to emphasize data dependency and to signal a gradual pace of further increases in the target range. In addition, several dealers reported that they expected the Chair to discuss the possibility of the next rate hike taking place either at the July meeting or in the coming months. Lastly, some respondents expected that the Chair would adopt a tone consistent with her speech on June 6.

2. a) Provide your estimate of the most likely outcome (i.e., the mode) for the target federal funds rate or range, as applicable, immediately following the FOMC meetings and at the end of each quarter or half-year period below. For the time periods at which you expect a target range, please indicate the midpoint of that range in providing your response.
b) In addition, provide your estimate of the longer-run target federal funds rate and your expectation for the average federal funds rate over the next 10 years.

c) The following questions relate to your expectations for the Committee's next policy action in 2016 and some associated conditional outcomes for the year-end 2016 target federal funds rate or range. Only fill out the conditional probability distributions in parts (ii), (iii), and (iv) if you assign a non-zero probability to the conditioning event occurring.

i) Please indicate the percent chance that you attach to the following possible outcomes for the Committee's next policy action in 2016.

(22 responses)

For parts a-d, please explain the factors behind any change to your expectations, where applicable, since the last policy survey.
Several dealers indicated that they revised their responses to reflect a more gradual expected path of increases in the target range, which they noted was driven by weaker-than-expected recent labor market data, communication from some Committee participants, and increased uncertainty over the economic outlook.

3. Of the possible outcomes below, please indicate the percent chance that you attach to the 10-year Treasury yield falling in each of the following ranges at the end of 2016 and 2017.

4. In a question in the March policy survey, respondents on average rated “changes in oil and commodity prices” as one of the most important factors in explaining changes in some components of the 5-year/5-year forward breakeven rate since mid-2014. Since the April FOMC meeting, prices on oil futures have increased while measures of the 5-year/5-year forward breakeven rate have declined. Please discuss your view on whether the relationship between oil prices and the forward breakeven rate has changed recently. If so, please discuss why.

(22 responses)

Several dealers indicated that there had been no material change in the relationship between oil prices and the forward breakeven rate, while several other dealers indicated that the relationship between oil prices and forward breakeven rates appeared less strong than it had been previously. In addition, several dealers indicated that they did not view oil prices as being structurally related to forward breakeven rates.

In explaining the recent changes in the forward breakeven rates, several dealers attributed the movements to U.S. policy expectations and/or movements in the U.S. dollar, changes in the levels of inflation risk premia, and structural changes in the economy and/or expected rates of global growth. In addition, several dealers indicated that oil prices have been driven recently by idiosyncratic or supply-side factors.

5. What are your expectations for the ON RRP facility over the next year?

Several dealers suggested that aggregate ON RRP demand will remain near recent ranges. Some dealers also expected increased aggregate ON RRP demand given an expected increase in demand for short-term, high-quality assets stemming from money fund reform implementation in the second half of 2016. Additionally, some dealers expected that the Committee will reduce the aggregate ON RRP cap from its current level in the future, likely sometime following money fund reform implementation in the second half of 2016.

6. In its most recent FOMC statement, the Committee indicated that it anticipates continuing reinvestments “until normalization of the level of the federal funds rate is well under way.”

a) Provide your estimate for the most likely timing (in months forward) of a change to the Committee’s policy on reinvesting payments of principal on Treasuries and/or agency debt and MBS. If you do not
expect the FOMC to change its policy on reinvestments for either or both asset classes during the process of policy normalization, please enter "N/A."

c) In its Policy Normalization Principles and Plans, the Committee indicated that it "expects to cease or commence phasing out reinvestments" after liftoff. Of the possible outcomes below, please indicate the percent chance that you attach to the Committee during the process of policy normalization ceasing its reinvestments all at once, phasing out its reinvestments over time, or not changing its reinvestments.

d) i) Conditional on not moving to the ZLB at any point in 2016-2018, what is your mean expectation for the par value of the SOMA portfolio at the end of 2018? For reference, the current level of the SOMA portfolio, including inflation compensation and settled and unsettled agency MBS according to the May 25, 2016, H.4.1, was $4259 billion.* (22 responses)
ii) Conditional on moving to the ZLB at some point in 2016-2018, what is your mean expectation for the par value of the SOMA portfolio at the end of 2018?

*This level references the most recent H.4.1 release at the time this survey was sent out to respondents.

Please explain the factors behind any change to your expectations in parts a-d since the last policy survey.
(15 responses)

Several dealers specifically noted that they made few significant changes to their responses in parts a-d since the last policy survey. Several other dealers explained that they shifted out their expectation for the most likely timing of a change to the Committee’s policy on reinvestments as a result of having revised later their expectations for the timing of additional rate hikes.

7. a) Provide your estimate of the most likely outcome for output, inflation, and unemployment.

* NBER-defined recession
**Previous IMF staff work has suggested that a “global recession” can be characterized as a period during which there is a decline in annual per-capita real global GDP, backed up by a decline or worsening in one or more of the following global macroeconomic indicators: industrial production, trade, capital flows, oil consumption and unemployment.

Please explain the factors behind any change to your expectations in parts a-c since the last policy survey. (17 responses)
Some dealers noted that their expected likelihood of a recession had increased given recent weak U.S. economic activity data, while several dealers indicated no change to their expectations since the last policy survey.
