

Quarterly Trends for Consolidated U.S. Banking Organizations

Fourth Quarter 2013

Federal Reserve Bank of New York
Research and Statistics Group

This report presents consolidated financial statistics for the U.S. commercial banking industry, including both bank holding companies (BHCs) and banks. Statistics are based on quarterly regulatory filings.¹ Statistics are inclusive of BHCs' nonbank subsidiaries. Separate statistics are reported on a merger-adjusted basis for the subset of BHCs with > \$500bn in total assets as of 2013:Q4², for BHCs with \$50bn-\$500bn in total assets as of 2013:Q4, and for the remainder of the industry.

Highlights

- Banking industry capital, as measured by the ratio of tier 1 common equity to risk-weighted assets, increased from 11.85% in 2013:Q3 to 11.94% in 2013:Q4. The leverage ratio, defined as the ratio of tier 1 risk-based capital to average total assets, remained steady over the fourth quarter at 8.77%.
- Annualized return on assets (ROA) for the industry increased from 0.78% to 0.87%. Return on equity (ROE) also rose from 7.3% to 8.2%. ROA and ROE increased for the largest BHCs (> \$500bn in assets), but decreased for the remainder of the industry.
- Non-performing loans as a percentage of total loans decreased in 2013:Q4, from 2.9% to 2.7%. This ratio has now declined for 16 consecutive quarters. The non-performing loan ratio was 3.8% for the largest BHCs, more than twice as high than the ratio for the remainder of the banking industry. Loan loss provisions increased in 2013:Q4, while net charge-offs as a percentage of total loans decreased slightly, reaching 0.63%, its lowest value since 2007:Q2.
- Loan growth for the industry was positive at 2.1% on a four-quarter-ended basis. Industry four-quarter-ended asset growth was also positive, at 1.2%.

¹ Industry statistics are calculated by summing consolidated financial data across all reporting U.S. parent BHCs (from the FR Y-9C report), plus values for "standalone" banks not controlled by a BHC, or whose parent BHC does not report on a consolidated basis (from the FFIEC 031/041 reports). The data do not include savings bank holding companies, branches and agencies of foreign banks, or nonbanks that are not held by a U.S. BHC.

² Six BHCs exceed this \$500bn size threshold: J.P. Morgan Chase, Bank of America, Citigroup, Wells Fargo, Goldman Sachs, and Morgan Stanley.

Data notes	21

1. Composition of Banking Industry Assets and Liabilities

Balance Sheet Composition

Balance Sheet Percentages

Federal Funds Sold and Purchased

Federal funds sold and purchased in domestic offices as % of total assets

Repurchase Agreements

Repurchase agreements as % of total assets

Note: These charts begin in 2002q1 because data for repurchase agreements and federal funds are not consistently reported separately prior to that date.

2. Earnings and Pre-Provision Net Revenue

Return on Assets

Return on Equity

Net Interest Margin

Noninterest Income Share

Note: Net operating revenue is defined as net interest income plus noninterest income.

Return on Trading Assets

Annualized trading income as % of trading assets

Non-Trading Non-Interest Income Ratio

Annualized non-trading non-interest income as % of total assets

Efficiency Ratio

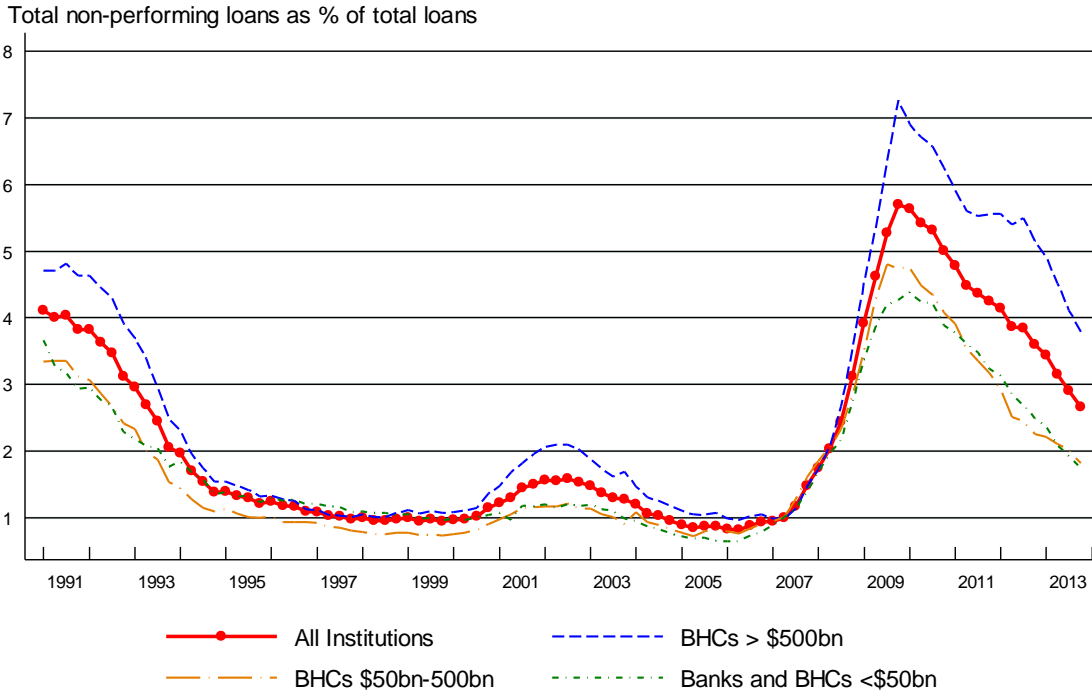

Note: Net operating revenue is defined as net interest income plus noninterest income.

3. Asset Quality

Note: Non-performing loans include loans that are (1) 90 days or more past due and still accruing or (2) non-accrual.

Non-performing Loans

Non-performing Real Estate Loans

Non-performing Residential Real Estate Loans

Non-performing residential real estate loans as % of residential real estate loans

Non-performing Commercial Real Estate Loans

Non-performing commercial real estate loans as % of commercial real estate loans

Non-performing Commercial and Industrial (C&I) Loans

Non-performing C&I loans as % of C&I loans

Non-performing Consumer Loans

Non-performing consumer loans as % of consumer loans

Note: Consumer loans are defined as the sum of credit card loans, other revolving credit plans, automobile loans, and other consumer loans.

Net Charge-offs

Annualized net charge-offs as % of total loans

Loan Loss Provisions

Annualized loan loss provisions as % of total loans

Loan Loss Reserves

Loan loss reserves as % of non-performing loans

4. Capital Adequacy and Asset Growth

Tier 1 Common Equity Ratio

Note: See data notes for the definition of tier 1 common equity. This chart begins in 2001q1 because data for tier 1 common equity are not available prior to this date

Tier 1 Capital Ratio

Note: This chart starts in 1996q1 because data for the components of this ratio are not available prior to that date.

Total Capital Ratio

Total risk-based capital as % of risk-weighted assets

Note: This chart starts in 1996q1 because data for the components of this ratio are not available prior to that date.

Leverage Ratio

Tier 1 risk-based capital as % of average total assets

Note: This chart starts in 1996q1 because data for the components of this ratio are not available prior to that date.

Note: Asset, loan and deposit growth rates presented below are affected by mergers with nonbanking firms, and conversions to and from a BHC charter during the sample period. This particularly affects the year-over-year growth rate for assets between 2009:Q1 and 2009:Q4, due to the entry of several new firms in 2009:Q1. See “Caveats and Limitations” for details.

Asset Growth Rates

Loan Growth Rates

Domestic Deposit Growth Rates

Year-over-year % change in domestic deposits

Risk-Weighted Assets Ratio

Risk-weighted assets as % of total assets

Note: This chart starts in 1996q1 because data for the risk-weighted assets component of this ratio are not reported prior to that date.

5. Consolidated Financial Statistics for the Fifty Largest BHCs

Rank	Name of Institution	Total Assets (Bil USD)	Quarterly Net Income (Mil USD)	Bank Profitability		Capital Adequacy Ratios (%)

*For the industry net income and capital adequacy ratios, we sum the numerator and denominator across individual firms and then compute ratios.

Notes and caveats

Methodology

The data used to construct the statistics in this report are drawn from the quarterly Consolidated Financial Statements for bank holding companies (FR Y-9C), and Consolidated Reports of Condition and Income for commercial banks (FFIEC 031 and 041). Reported statistics are defined in a time-consistent way across reporting form vintages.

To calculate the “all institutions” quarterly series, we aggregate the data for top-tier bank holding companies (BHCs), including US BHCs and bank subsidiaries of foreign banking organizations,³ as well as commercial banks owned by BHCs that are too small to file Y-9C reports (the current reporting threshold is \$500m of total assets), and unaffiliated (stand-alone) commercial banks. We identify “top-tier” BHCs (i.e. the U.S. parent entity) via the National Information Center (NIC, <http://www.ffiec.gov/nicpubweb/nicweb/nichome.aspx>), which provides data on firm attributes and structure. We identify commercial banks that are standalone firms or are owned by small BHCs by identifying all banks whose high holder does not submit a FR Y-9C report.

Separate statistics are also reported for the subset of BHCs with greater than \$500 billion in total assets, for the subset of BHCs with \$50 - \$500 billion in total assets, and for the remainder of the industry. In 2013:Q4, 33 BHCs exceed \$50 billion in total assets, 6 of which exceeded the \$500 billion threshold: JPMorgan Chase, Bank of America, Citigroup, Wells Fargo, Goldman Sachs, and Morgan Stanley. For consistency, time-series graphs for the “> \$500bn” and “\$50-\$500bn” groups represent available historical values for this same subset of firms. Statistics for most firms with more than \$50 billion in total assets are prepared on a pro forma (merger-adjusted) basis; specifically, on the basis that all BHCs acquired by each of these firms over the sample period with US regulatory filings are part of the consolidated BHC from the start of the historical time period. Data values of acquired BHCs are then summed with acquirer data in the period before the acquisition. Merger events are identified using the NIC transformations table maintained by the Federal Reserve Board of Governors. Note that three BHCs with more than \$50 billion in total assets are not adjusted using the pro forma methodology: TD Bank, Bancwest, and Deutsche Bank. After constructing the pro forma series for each firm, we aggregate the data to create the “BHCs > \$500bn” and the “BHCs \$50-\$500bn” series. Finally, the “all other banks and BHCs” quarterly series is constructed by subtracting the “BHCs > \$500bn” and “BHCs \$50-\$500bn” series from the “all institutions” series.

³ The term “foreign-banking organization” generally refers to a foreign bank that (1) operates a branch, agency, or commercial lending company subsidiary in the United States; (2) controls a bank in the United States; or (3) controls an Edge corporation acquired after March 5, 1987. The term also includes any company of which such a foreign bank is a subsidiary. See 12 C.F.R. § 211.11(o).

The charts and tables presented in this report are grouped into the following five categories: composition of banking industry assets and liabilities, earnings and pre-provision net revenue, asset quality, capital adequacy and asset growth, and consolidated financial statistics for the fifty largest BHCs. Definitions of each plotted variable are presented on each chart.

Caveats and limitations

Statistics in this report are presented “as is”, based on calculations conducted by Federal Reserve Bank of New York research staff. While significant efforts have been made to ensure accuracy, the statistics presented here may be subject to future revision, for example because of changes or improvements in the “pro forma” methodology used to calculate statistics for industry subgroups.

We highlight a number of important limitations of the statistics presented here:

- Statistics exclude financial firms that are not either commercial banks or part of a commercial bank holding company. This creates discontinuities in the time-series graphs when nonbanking firms are acquired or sold by banks or BHCs, or when firms switch to or from a bank or BHC charter. For example, in 2009:Q1, Goldman Sachs, Morgan Stanley, Ally Financial, and American Express each began filing a FR Y-9C due to the conversion of each of these firms to a commercial banking holding company charter. This largely accounts for the sharp 13% increase in total measured industry assets in 2009:Q1, and a corresponding discontinuous upward shift in the industry asset growth rate during 2009.
- For the same reason, only 4 of the 6 BHCs in the BHCs > \$500bn group (described in the methodology section on the previous page) exist in the data for the entire sample period (1991:Q1 to 2013:Q4). These 4 BHCs are JPMorgan Chase, Bank of America, Wells Fargo, and Citigroup. Goldman Sachs and Morgan Stanley entered the sample in 2009:Q1.
- Flow variables in bank and BHC regulatory filings are reported on a year-to-date basis. Quarterly flow variables are derived by “quarterizing” the data, that is, by subtracting the variable at time t-1 from the variable at time t for Q2, Q3, and Q4 of each calendar year. This quarterization procedure can create discontinuities when a bank or BHC enters the sample any time other than in Q1. To account for this, we drop the firm’s quarter of entry observation from the sample. This adjusted data is used to calculate all ratios in this report that are based on flow variables. However, to retain as much of the data as possible, unadjusted data is used to calculate ratios based only on stock variables, since stock variables do not need to be quarterized.

- Due to data limitations, industry statistics exclude nonbank subsidiaries of small BHCs that do not file a FR Y-9C (currently the FR Y-9C is filed only by firms with \$500m in total assets). The effect of this exclusion on industry statistics is expected to be minor, however, since small BHCs generally do not have large nonbank subsidiaries.

Data notes

1. The definition of tier 1 common equity for BHCs used for this report is: tier 1 common equity = tier 1 capital – perpetual preferred stock and related surplus + nonqualifying perpetual preferred stock – qualifying Class A noncontrolling (minority) interests in consolidated subsidiaries – qualifying restricted core capital elements (other than cumulative perpetual preferred stock) – qualifying mandatory convertible preferred securities of internationally active bank holding companies. The definition of tier 1 common equity for banks is: tier 1 common equity = tier 1 capital – perpetual preferred stock and related surplus + nonqualifying perpetual preferred stock – qualifying noncontrolling (minority) interests in consolidated subsidiaries.
2. In the first quarter of 2010, banking organizations were required to transfer certain off-balance sheet items onto their balance sheets under FASB 166 and 167. These guidelines substantially affected loan balances, as large amounts of securitized loans were transferred onto bank balance sheets. This accounting change was likely a major factor influencing year-over-year growth rates of loans and total assets during this period, potentially causing these growth rates to appear larger than they would have otherwise been.
