# Summary

- Economic conditions across the District have been mixed, but clearly weak, since the outbreak of the pandemic.
- The outbreak initially hit the tri-state region harder than any other part of the U.S., whereas Puerto Rico and the USVI have seen much less virus spread.
- Not surprisingly, New York City's economy sustained a steeper decline than the rest of the region or the U.S.—both in terms of employment and consumer spending.
- The magnitude and suddenness of this economic downturn make it more comparable to a natural disaster—specifically Hurricane Katrina in New Orleans—than a typical recession.
- Many of the job losses have been viewed as temporary layoffs or furloughs, and businesses have grown more optimistic about the near-term outlook and have begun to rehire.
