ACKNOWLEDGMENTS

This Small Business Credit Survey (SBCS) is made possible through collaboration with more than 400 business organizations in communities across the United States. The Federal Reserve Banks thank the national, regional, and community partners who share valuable insights about small business financing needs and collaborate with us to promote and distribute the survey.¹ We also thank the National Opinion Research Center (NORC) at the University of Chicago for assistance with weighting the survey data to be statistically representative of the nation’s small business population.²

Special thanks to colleagues within the Federal Reserve System, particularly the Community Affairs Officers,³ and representatives from the U.S. Department of the Treasury, U.S. Small Business Administration, the Association for Enterprise Opportunity (AEO), and The Aspen Institute for their support for this project. Thanks also to our SBCS team, including Ellyn Terry, Shannon McKay, Karen Leone de Nie, Brett Barkley, Anne Marie Wiersch, and Emily Wavering for their incisive feedback.

We particularly thank the following individuals:

**Daniel Davis**, Community Development Officer, Federal Reserve Bank of St. Louis

**Menna Demessie**, Vice President, Policy Analysis & Research, Congressional Black Caucus Foundation

**Annie Donovan**, Director, CDFI Fund, U.S. Department of the Treasury

**Ingrid Gorman**, Research and Insights Director, Association for Enterprise Opportunity

**Tammy Haley**, Senior Vice President, New Initiatives, Association for Enterprise Opportunity

**Kausar Hamdani**, Senior Vice President, Federal Reserve Bank of New York

**Gina Harman**, Chief Executive Officer, Accion USA

**Brian Headd**, Chief Economic Advisor, U.S. Small Business Administration

**Joyce Klein**, Director, FIELD, The Aspen Institute

**Joy Lutes**, Vice President of External Affairs, National Association of Women Business Owners

**John Moon**, District Manager, Community Development, Federal Reserve Bank of San Francisco

**Chad Moutray**, Chief Economist, National Association of Manufacturers

**Robin Prager**, Senior Adviser, Federal Reserve Board of Governors

**Alicia Robb**, Chief Executive Officer, Next Wave Ventures

**Lauren Rosenbaum**, Communications Manager, U.S. Network, Accion

**Lauren Stebbins**, Vice President, Small Business Initiatives, Opportunity Finance Network

**Jeffrey Stout**, Director, State Small Business Credit Initiative, U.S. Department of the Treasury

**Storm Taliaferro**, Manager of Membership & Impact Assessment, National Association for Latino Community Asset Builders (NALCAB)

**Richard Todd**, Vice President, Federal Reserve Bank of Minneapolis

**Holly Wade**, Director of Research and Policy Analysis, National Federation of Independent Business

**Eric Weaver**, Chief Executive Officer, Opportunity Fund

**Kristin Westmoreland**, Vice President, Center for Capital Markets Competitiveness, U.S. Chamber of Commerce

**Allison Kroeger Zeller**, Director of Research, National Retail Federation

EXECUTIVE SUMMARY

This report is the second in a series of reports based on the 2016 Small Business Credit Survey (SBCS), a national collaboration of the Community Development Offices of the 12 Federal Reserve Banks. As a follow-up to the Report on Employer Firms issued in April 2017, the Report on Startup Firms provides an in-depth look at the financing and credit experiences of startups with employees—which we define as small businesses that were five years old or younger in 2016 and had full- or part-time employees.

Startups are of particular interest since they account for 34% of all small employer firms and play an outsized role in U.S. innovation and productivity. Young firms are the drivers of job growth in the United States, accounting for nearly all net new job creation and almost 20% of gross job creation. Yet, even as their importance has become more widely recognized, the rate of startup creation has been decreasing for years. And, of those ventures that launch, failure rates are high. Approximately one-third of new establishments fail within their first two years, and half fail within five years.

Given the importance of startups for the economy, the question of startup capital needs is of central importance. Access to capital is important for both firm formation and growth. While funding is the lifeblood of every company, capital is especially critical for startups. To reach scale, startups need to be able to secure expansion capital. The Report on Startup Firms offers detailed intelligence on startups’ financing needs and challenges, asking questions about capital requests, borrowing qualifications, applications and success levels.

The SBCS offers a unique dataset to examine the financing realities of firms that launched after the Great Recession, amid a challenging and changing financial landscape. Even though most small firms seek small amounts of financing (55% of 2016 SBCS respondents sought $100,000 or less), small dollar credit is difficult to obtain. The small-dollar loan share of lending has fallen from 33% in 2008 to 22% in 2016, and continues to decline. Instead, firms may be turning to other financing sources. Product-wise, credit card lending has been rising since the recession, with implications for borrowing costs. In addition, a variety of online alternative lenders have introduced new lending products and services. The SBCS enables us to examine the interplay between these broader market trends and small business borrowers’ experiences.

This report addresses several important borrower-centric questions:

- How strong is demand for financing among startups?
- Are startup firms seeking financing and credit from traditional lenders, or are younger firms attracted to new capital sources?
- How successful are new firms in obtaining financing, and how do they rate their experiences with lenders?

OVERALL, THE SURVEY FINDS:

Startup firms have strong demand for financing and optimism than mature small employer firms (called “mature firms” throughout), but also have greater credit risk

- Startup firms are twice as likely as mature firms to be growing firms (adding jobs and growing revenues): 43% compared to 22%.
- 70% of startup applicants sought funding for expansion, compared to 60% of mature applicants.
- Most startup firms are optimistic about their future growth, with net majorities (the share of firms expecting an increase minus the share expecting a decrease) anticipating revenue and/or employment growth in the next 12 months.
- Startup expectations are notably stronger than those of mature firms. For example, a net 61% of 0-2 year old and net 54% of 3-5 year old firms expect to add jobs, compared to 29% of mature firms.
- Despite these positives, only 32% of 0-2 year old firms and 49% of 3-5 year old firms report being profitable, compared to 60% of mature firms.
- 44% of startup firms self-identify as medium and high credit risk, compared to 30% of mature firms. Roughly half of the firms who reported credit risk scores used personal — instead of business — scores.

Startups have strong demand for financing yet smaller financing needs than mature firms

- Half of startup firms are seeking external financing; 52% of startup firms applied for financing in 2016, compared to 42% of mature firms.
- 63% of startup applicants sought $100,000 or less in financing, compared to 49% of mature applicants.

1 Defined in our analysis as firms five years old or younger.
6 The most mature startups (5 years old) in this report were launched in 2011.
Financing challenges for startup firms are more common than for mature firms, even at comparable credit risk scores

- 58% of 0–2 year old firms and 53% of 3–5 year old firms reported difficulty with credit availability or accessing funds for expansion, compared to 39% of mature firms.
- 69% of startup applicants experienced a financing shortfall, meaning they obtained less than the amount they sought, compared to 54% of mature applicants.
- About half (53%) of low credit risk startup applicants experienced a financing shortfall, compared to 41% of mature, low credit risk applicants.
- Startup applicants most frequently cited insufficient credit history as the reason for not receiving the full amount of financing requested (50% of low credit risk and 47% of medium and high credit risk startup applicants reported this reason).

Startup firm application rates vary by credit risk

- Startup firms continue to seek loans/line of credit at higher rates from banks than from other types of lenders.
- However, medium and high credit risk startup applicants are much more likely to apply to online lenders than are low credit risk startup applicants. 39% of medium/high credit risk startup applicants went to online lenders compared to only 11% of low credit risk startup applicants.
- In fact, medium/high credit risk applicants reported applying to online lenders at comparable rates to small banks, regardless of their age. 39% of medium/high credit risk startup applicants and 35% of medium/high risk mature applicants went to online lenders, compared to 41% and 43% that applied to small banks, respectively.

Startup firm success rates vary considerably across lender types

- Low credit risk startup applicants have relatively high success in receiving at least some financing across lenders but are more successful at small banks (78%) and online lenders (76%) than at large banks (63%).
- Medium/high credit risk startup applicants are notably more successful at online lenders (45% receive at least some financing) than at large banks (26%) or small banks (35%).
- Startup applicant satisfaction overall was highest with small banks, with 48% of startup applicants reporting positive experiences and lowest with online lenders, where only 23% reported positive experiences.
- Overall, mature applicants reported higher satisfaction levels across all lenders: 64% were satisfied with small banks, 40% were satisfied with large banks, and 37% were satisfied with online lenders.

Credit cards are important financial products for startup firms

- 41% of startup applicants applied for credit cards, their second most commonly sought product. Startup applicants more often seek credit cards compared to mature applicants, but apply at a similar rate for loans/lines of credit.
- Credit cards are the financing product most nonapplicant startups (half of startups overall) use on a regular basis, more than loans/lines of credit, leasing, or other financing types.

More than half of startup nonapplicants are either avoiding debt or are discouraged from applying

- 27% are debt averse; they tend to be lower credit risks and are less likely than applicants to have experienced financial challenges.
- 27% are discouraged—they did not apply because they believed they would be turned down—twice the share of mature nonapplicants. These firms tend to be higher credit risks and have reported prior financial challenges.

- 36% of startup nonapplicants indicated they had sufficient financing, compared to 51% of mature nonapplicants. This group is more likely to report lower credit risk and less likely to have faced financial challenges.

A note on terminology and data comparisons: In this report, we refer to startup firms as firms that are 0–5 years of age and have more than one and fewer than 500 full- or part-time employees. Where we can, we break out early stage (0–2 year old) and second stage (3–5 year old) firms because there are notable differences between early stage and second stage firms in securing external financing; firms with less than two years of financials and tax documents are less likely to meet traditional underwriting requirements. We also compare startups to mature small employer firms, which we call “mature firms” for brevity: businesses that are more than 5 years old and have more than one and fewer than 500 full- or part-time employees. In cases where comparisons with mature firms are not included in the charts and tables, we footnote the relevant statistics.

ABOUT THE SMALL BUSINESS CREDIT SURVEY

The SBCS is an annual survey of firms with fewer than 500 employees. These types of firms represent 99.7% of all employer establishments in the United States. The 2016 SBCS, which was fielded in Q3 and Q4 2016, yielded 10,303 responses from employer firms in 50 states and the District of Columbia, and of these, 2,159 were responses from startup firms. For detailed information about the survey design and weighting methodology, please consult the Methodology section.
Startup firms make up about a third of small employer firms.

**AGE OF FIRM** (% of employer firms)  
N=10,303

- 66% >5 years
- 20% 0–2 years
- 14% 3–5 years

**AGE OF FIRM’S PRIMARY DECISION MAKER** (% of employer firms)

- Under 36: 4%
- 36–45: 14%
- 46–55: 31%
- 56–65: 19%
- Over 65: 17%

**CREDIT RISK** (% of employer firms)

- Low credit risk: 56%
- Medium/high credit risk: 44%

**BUSINESS STAGE** (% of employer firms)

- Not growing: 57%
- Growing: 43%

---

1 SBCS responses throughout the report are weighted using Census data to represent the US small business population on the following dimensions: firm age, size, industry, and geography. For details on weighting, see p. 21.
2 Percentages may not sum to 100 due to rounding.
3 Self-reported business credit score or personal credit score, depending on which is used to obtain financing for their business. If the firm uses both, the highest risk rating is used. ‘Low credit risk’ is a 80-100 business score or 720+ personal credit score. ‘Medium/high credit risk’ is a 1-79 business score or <720 personal credit score.
4 Growing firms are defined as those that increased revenues and employees in the prior 12 months and plan to increase or maintain their number of employees.

1 Among firms >5 years, 59% used a personal guarantee, 53% used business assets, 35% used personal assets, 8% used portions of future sales, and 12% used none (N=5,787).
2 Respondents could select multiple options. Response options 'unsure' and 'other' not shown in chart. See Appendix for more detail.
3 Percentages may not sum to 100 due to rounding.
48% of startup firms did not apply for financing.

Among startup firms, nonapplicants were less likely to have financial challenges than applicants.

PERFORMANCE OF NONAPPLICANTS AND APPLICANTS (N=2,159) (% of startup firms)

- **Low credit risk**: 62% (Nonapplicants) vs. 50% (Applicants)
- **Operated at a profit**: 41% (Nonapplicants) vs. 37% (Applicants)
- **Growing**: 39% (Nonapplicants) vs. 46% (Applicants)
- **Experienced no financial challenges**: 42% (Nonapplicants) vs. 18% (Applicants)

Notes:
1. Among firms >5 years, 58% did not apply for financing (N=8,144).
2. Approximately the second half of 2015 through the second half of 2016.
3. Response option ‘other’ not shown. See Appendix for detail.
4. Discouraged firms are those that did not apply for financing because they believed they would be turned down.
5. Among nonapplicant firms >5 years, 77% are low credit risks, 62% are profitable, 18% are growing, and 56% experienced no financial challenges (N=2,503-4,340).
6. Among applicant firms >5 years, 61% are low credit risks, 56% are profitable, 26% are growing, and 28% experienced no financial challenges (N=2,574-3,658).
7. Self-reported business credit score or personal credit score, depending on which is used to obtain financing for their business. If the firm uses both, the highest risk rating is used. ‘Low credit risk’ is a 80-100 business score or 720+ personal credit score. ‘Medium/high credit risk’ is a 1-79 business score or <720 personal credit score.
8. At the end of 2015.
9. Firms that increased revenues and employees in the prior 12 months and that plan to increase or maintain their number of employees.
10. Firms that did not experience any of the following financial challenges in the past 12 months: Making payments on debt, paying operating expenses, purchasing inventory or supplies to fulfill contracts, credit availability or securing funds for expansion.

<td></td>
</tr>
</tbody>
</table>

1 Among firms >5 years that applied at small banks, 64% were satisfied, 17% were neutral, and 19% were dissatisfied (N=1,332); at large banks, 40% were satisfied, 21% were neutral, and 39% were dissatisfied (N=1,330); and at online lenders, 37% were satisfied, 36% were neutral, and 27% were dissatisfied (N=317).
2 Response options ‘credit union,’ ‘CDFI,’ and ‘other’ not shown due to insufficient sample sizes.
3 The values for lender satisfaction presented in the 2016 Report on Employer Firms include applicants that were approved at the source. Because of small sample sizes, values presented here include applicants who were approved or denied at the source. For this reason, the reported lender satisfaction is not comparable across reports.
4 Respondents were provided a list of large banks (those with at least $10B in total deposits) operating in their state.
5 ‘Online lenders’ are defined as nonbank alternative and marketplace lenders, including Lending Club OnDeck, CAN Capital, and PayPal Working Capital.
6 Respondents could select multiple options. This question is not comparable to the 2015 survey because in the 2016 survey the response options of denied applicants were limited to ‘long wait for credit decision,’ ‘difficult application process,’ and ‘lack of transparency.’
7 Response option ‘other’ not shown in chart. See Appendix for more detail.
8 Firms >5 years were dissatisfied at large banks for the following reasons: 5% high interest rate, 7% unfavorable terms, 48% long wait, 43% difficult process, 47% lack of transparency (N=458); at small banks: 3% high interest rate, 4% unfavorable terms, 44% long wait, 37% difficult process, 45% lack of transparency (N=209); and at online lenders: 35% high interest rate, 20% unfavorable terms, 21% long wait, 27% difficult process, 48% lack of transparency (N=101).
METHODOLOGY

DATA COLLECTION

The Small Business Credit Survey (SBCS) uses a convenience sample of establishments. Businesses are contacted by email through a diverse set of organizations that serve the small business community. Prior SBCS participants and small businesses on publicly available email lists are also contacted directly by one of the Federal Reserve Banks. The survey instrument is an online questionnaire that typically takes 6 to 12 minutes to complete, depending upon the intensity of a firm’s search for financing. The questionnaire uses question branching and flows based upon responses to survey questions. For example, financing applicants receive a different line of questioning than nonapplicants. Therefore, the number of observations for each question varies according to how many firms receive and complete a particular question.

WEIGHTING

A sample for the SBCS is not selected randomly; thus, the SBCS may be subject to biases not present with surveys that do select firms randomly. For example, there are likely small employer firms not on one of our contact lists and this may lead to a noncoverage bias. We control for potential biases by weighting the sample data so that the weighted distribution of firms in the SBCS matches the distribution of the small (1 to 499 employees) firm population in the United States by number of employees, age, industry, and geographic location (census division and urban or rural location). We collaborate with the National Opinion Research Center (NORC) in order to calculate these weights. The data used for weighting come from data collected by the U.S. Census Bureau. While weighting the data makes the sample considerably more representative of the small firm population, the SBCS is still potentially affected by nonresponse bias, something that should be taken into consideration when interpreting the results.

COMPARISONS TO PAST REPORTS

Because previous SBCS reports have varied in terms of the population scope, geographic coverage, and weighting methodology, the survey reports are not directly comparable across time.

For example, both employer and nonemployer firm results from the 2014 survey are combined into one report (published in 2015) while employers and nonemployers are divided into separate reports for the 2015 and 2016 surveys (published in 2016 and 2017, respectively).

Moreover, geographic coverage and weighting strategies varied from year to year. In the employer/nonemployer combined report using 2014 survey data, geographic coverage includes only 10 states and data are weighted by firm age, nonemployer/employer, number of employees (if employer firm), state, and industry. The employer report using 2015 survey data covers 26 states and is weighted by firm age, number of employees, and industry. The employer report using 2016 survey data includes respondents from all 50 states and the District of Columbia. The data are weighted by firm age, number of employees, industry, and geographic location (census division and urban or rural location). In addition to being weighted by different firm characteristics over time, the categories used within each characteristic have also differed across survey years (there were three employee size categories in 2015, and five employee size categories in 2016). Further, respondents are weighted according to the composition of firms in the geographic area of coverage.

In addition to population scope, geographic coverage, and weighting differences, some of the survey questions have also changed slightly from year to year, making some question comparisons impossible even when using a time-consistent weighting approach.

Finally, this report on startup firms focuses on employer firms that have been established for five years or less, whereas past reports have used the term “startup” to refer to those firms less than three years in age. For these reasons, data in this report cannot be compared to past reports (those published prior to 2017). However, this report does use a weighting approach consistent with that of the 2016 Small Business Credit Survey Report on Employer Firms, and therefore the two reports can be compared, unless indicated otherwise.

---

1 For a full list of community partners, please see p. 23.
2 System for Award Management (SAM) Entity Management Extracts Public Data Package, Small Business Association (SBA) Dynamic Small Business Search (DSBS), state-maintained lists of certified disadvantaged business enterprises (DBEs), state and local government Procurement Vendor Lists, state and local government-managed lists of small or disadvantaged small businesses, a list of veteran-owned small businesses maintained by the Department of Veterans Affairs.
3 Age of firm data come from the 2014 Business Dynamics Statistics. Industry, employee size, and geographic location data are from the 2014 County Business Patterns. We use data from the Center for Medicare and Medicaid Services to classify a business’s zip code as urban or rural. In subsequent reports, we will compare businesses by the gender and race of the owner(s). When we do this, we will also weight the data by demographic data collected in the 2012 Survey of Business Owners.
4 The 2016 nonemployer report will be released later this year.
5 Federal Reserve Banks, 2016 Small Business Credit Survey Report on Employer Firms.
CREDIBILITY INTERVALS

The analysis in this report is aided by the use of credibility intervals. Where there are large differences in estimates between types of businesses, we perform additional checks on the data to determine whether the difference appears significant. The results of these tests help guide our analysis and help us decide what ultimately is included in the report. In order to determine whether a difference is significant, we develop credibility intervals using a balanced half-sample approach.6 Because the SBCS does not come from a probability-based sample, the credibility intervals we develop should be interpreted as model-based measures of deviation from the true national population values.7 Ninety-five percent credibility intervals for key statistics are listed in Table 1. More granular results with smaller observation counts will generally have larger credibility intervals.

### Table 1: Credibility Intervals for Key Statistics in the 2016 Report on Startup Firms

</tbody>
</table>

**Table notes:**
1 For profitability, the index is the share profitable minus the share with losses during the 12 months prior to the survey. For revenue and employment growth, it is the share reporting positive growth minus the share reporting negative growth.
2 The share of loan and line of credit applicants that were approved for at least some financing.
3 Percent of applicants
4 Discouraged firms are those that did not apply for financing because they believed they would be turned down.
