

Foreign Exchange Committee Releases FX Volume Survey Results

New York, July 29, 2013 – The Foreign Exchange Committee today released the results of its eighteenth Survey of North American Foreign Exchange Volume. For the April 2013 reporting period, key findings are featured below.

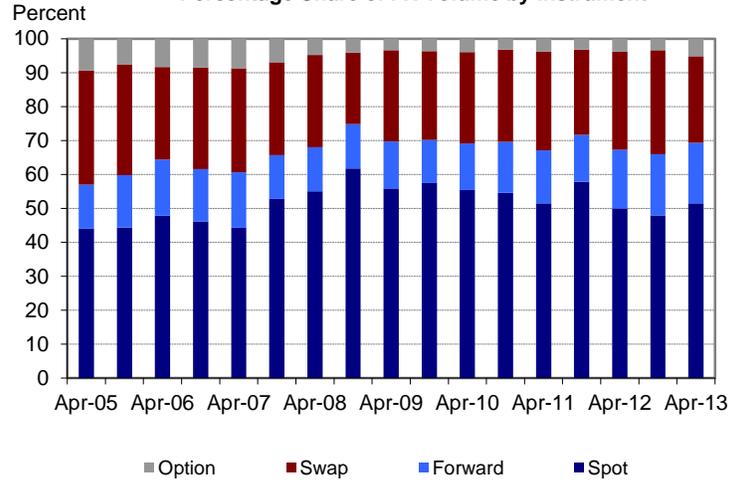

- Average daily volume in total over-the-counter foreign exchange instruments (including spot, outright forward, foreign exchange swap, and option transactions) increased by 27 percent since the last survey and reached \$1.0 trillion in April 2013, the highest level since the survey's inception.
- Average daily volume increased across all instrument types but rose most significantly on a percentage basis for OTC options, spot, and forwards activity.
- The rise in turnover occurred across participant types but was particularly pronounced for “other financial customers”, who accounted for more than half of the increase in total average daily volume.
- Average daily turnover in the U.S. dollar versus the Japanese yen currency pair accounted for roughly 47% of the increase in total average daily volume.

Average Daily Volume Composition by Currency Pair, April 2013

The survey was developed in order to provide the market with frequent information on the size and structure of foreign exchange activity in North America. To achieve a representative survey, the Committee invited twenty-five leading financial institutions active in the North American foreign exchange market to contribute data on the level of turnover during the month of April 2013. The Committee also collaborated with the United Kingdom's Foreign Exchange Joint Standing Committee (FXJSC), the Singapore Foreign Exchange Market Committee (SFEMC), the Tokyo Foreign Exchange Market Committee (TFEMC), the Canadian Foreign Exchange Committee (CFEC), and the Australian Foreign Exchange Committee (AFXC), which conducted similar surveys for the U.K., Singaporean, Japanese, Canadian, and Australian markets, respectively, over the same period. The FXJSC, SFEMC, CFEC, and AFXC are releasing their survey results today. The TFEMC released its results late yesterday.

For the purposes of the survey, turnover is defined as the gross value of all new deals entered into during the reporting period and is measured in terms of the notional amount of the contracts. Survey data are broken out by four foreign exchange instruments, thirteen currency pairs, four counterparty types, and five execution methods and are reported both in terms of daily average and total monthly volume. The reporting basis for the survey is the location of the price-setting dealer. While similar in nature, the survey is not comparable to the Bank for International Settlements' Triennial Central Bank Survey of Foreign Exchange and Derivatives Market Activity, given the differences in the reporting methodologies.

The Foreign Exchange Committee is composed of individuals from institutions that participate actively in the foreign exchange markets as well as other financial markets worldwide. The Committee's objectives include 1) serving as a forum for the discussion of best practices and technical issues in the foreign exchange market, 2) fostering improvements in risk management in the foreign exchange market by offering recommendations and guidelines, and 3) enhancing the legal certainty of foreign exchange contracts through the development of standard documentation. The Committee was formed in 1978 under the sponsorship of the Federal Reserve Bank of New York.
